- Relay outputs with internal or external power source and fusing
- Solid state outputs.

Each type of FBM, without signal conditioning, uses a 15 to 60 V dc input or output signal. Each discrete input and output is galvanically isolated from other channels and ground. When used with external excitation, each discrete input and output is group isolated.

## OVERVIEW

The Channel Isolated, Discrete I/O Interface Modules (FBM241/b/c/d) have eight discrete input channels and eight discrete output channels. Associated termination assemblies (TAs) support discrete input or output signals at voltages of under 60 V dc, 120 V ac/125 V dc, or 240 V ac.

Depending on the type of I/O signal required, the TAs contain current limiting devices, fuses, relays, or relay outputs with internal or external power source and fusing.

The module is available in four distinct types and each type with its associated TA supports the following discrete inputs and outputs:

The module performs signal conversion required to interface electrical input signals from field sensors to the optionally redundant Fieldbus. It executes the Discrete I/O or Ladder Logic program, with the following configurable options: Input Filter Time, Fail Safe Configuration, Fail-Safe Fall-Back, and Sustained or Momentary Outputs. If the Momentary Output configuration is selected, then Pulse Output Interval is also configurable.

## COMPACT DESIGN

The module has a compact design, with a rugged extruded aluminum exterior for physical protection of the circuits. Enclosures specially designed for mounting the FBMs provide various levels of environmental protection, up to harsh environments, per ISA Standard S71.04.

## VISUAL INDICATORS

Light-emitting diodes (LEDs) incorporated into the front of the module provide visual indication of the Fieldbus Module operational status, as well as the discrete states of the individual input and output points.

## EASY REMOVAL/REPLACEMENT

The module can be removed/replaced without removing field device termination cabling, power, or communication cabling.

FBM	Inputs	Outputs
FBM241	15 to 60 V dc, 125 V dc, 120 V ac, or 240 V ac Switch (external or internal power source)	15 to 60 V dc at 2 A, or 30 V dc at 5 A, or 125 V dc at 0.5 A, or 120 V ac at 5 A, or 240 V ac at 5 A Switch (external or internal power source)
FBM241b	15 to 60 V dc Switch	12 V dc at 12 mA Switch (internal power source)
FBM241c	15 to 60 V dc Contact (unprotected - no fuse, or protected - fused)	15 to 60 V dc at 2 A, or 240 V ac at 5 A Switch (external or internal power source)
FBM241d	15 to 60 V dc Contact	12 V dc at 12 mA Switch (internal power source)

## **FIELDBUS COMMUNICATION**

A Fieldbus Communications Module or a Control Processor interfaces to the redundant 2 Mbps Fieldbus. Redundancy is provided by the F2Ms. The FBM241 accepts communication from either path (A or B) of the redundant 2 Mbps Fieldbus - should one path fail or be switched at the system level, the module continues communication over the active path.

## **MODULAR BASEPLATE MOUNTING**

The module mounts on a DIN rail mounted baseplate, which accommodates up to four or eight Fieldbus Modules. The Modular Baseplate is either DIN rail mounted or rack mounted, and includes signal connectors for redundant Module Fieldbus, redundant independent dc power, and termination cables.

## **SECURITY**

Field power for contacts or solid state switches is current limited.

## **TERMINATION ASSEMBLIES**

Field I/O signals connect to the FBM subsystem via DIN rail mounted TAs. The TAs used with the FBM241/b/c/d are described in "TERMINATION ASSEMBLIES AND CABLES" on page 9.

### Isolation

Each channel is galvanically isolated from all other channels and earth (ground). The module withstands, without damage, a potential of 600 V ac applied for one minute between any channel and ground, or between a given channel and any other channel. Channels are group isolated when used with external excitation.

### CAUTION

This does not imply that these channels are intended for permanent connection to voltages of these levels. Exceeding the limits for external voltages, as stated elsewhere in this specification, violates electrical safety codes and may expose users to electric shock.

### Communication

Communicates with its associated FCM or FCP via the redundant 2 Mbps module Fieldbus
